SealPack

An advanced roll-on packaging concept

SealPack

An advanced roll-on packaging concept

Capitalizing on many years of experience, Weener Plastics has developed SealPack, in every way a smart roll-on packaging concept for deodorants and antiperspirants.

Smart Concept

SealPack is an innovative one-piece deo container featuring an effective, patented sealing feature that provides optimum ball tightness. There is no need for a separate ball fitment, making the package significantly lighter. The container can be fitted with a standard 1.4" roll-on ball and matching standard screw cap. It has a convenient opening and closing due to a harmonic torque and 3-start thread.

Regarding e-commerce, SealPack has passed the ISTA 6 Amazon overboxing test for prep-free packaging (PFP), underlining its outstanding functionality.

Easy Customization

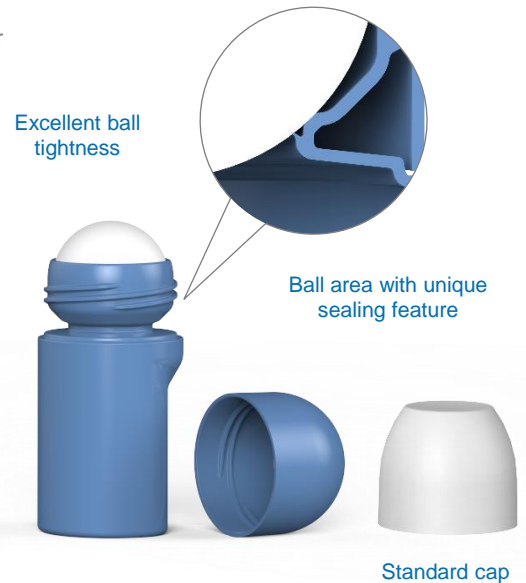

The design of the ball area with sealing feature is fixed to maintain desirable ball tightness and rotation for convenient armpit deodorant application. The design of the container section is however flexible. Customers can opt for an individual, appealing design thanks to an exchangeable tool part. From a straight, smooth, male look to a more feminine design, anything is possible with limited investment costs. In addition, the screw cap can also be customized.

Unique Benefits

- Flexible design
- Cost-effective solution
- Excellent sealing and tightness
- Extremely lightweight
- Option for PP mono-material for optimum recycling
- Convenient opening and closing
- Approved for e-commerce (ISTA 6)

Specifications

- 3-piece solution: container, ball and over cap
- Content can range from 50 to 70 ml
- Standard ball 1.4"; other sizes possible (1", 1.14", 1.3", 1.5")
- Matt surface finish
- Material of the ball and cap PP
- Material of the container PP or PE

Options for customized caps
